EDUCATION

Thapar Institute of Engineering & Technology
Bachelor of Engineering, Computer Science (CGPA: 9.14/10)

Patiala, Punjab, IN
Jun 2024 – Jun 2028

WORK EXPERIENCE

Research & Development Intern

Samsung R&D Institute India

Jul 2026 – Present

Remote | Bengaluru, IN

- Conceptualized SmarTest, an AI-powered test-case generation and regression-analysis system, collaborating in a 4-member team to flag test cases impacted by GitHub pull requests.
- Architected an agentic pipeline unifying FastAPI, GitHub Webhooks, PostgreSQL, and GPT-4 via LangChain to analyze code changes and generate/update Gherkin test cases for a microservice-based repository.
- Devised a human-in-the-loop validation workflow blending deterministic code analysis with LLM-based test decisions, targeting more than 95% accuracy on existing tests and 90% on new test generation.

Backend Developer Intern

Wyreflow Technologies

May 2026 – Jul 2026

Remote | Bengaluru, IN

- Engineered and maintained 10+ backend APIs on Django REST Framework, powering authentication, payments, and user management for a live production application while coordinating with cross-functional teams.
- Architected REST APIs for OTP-based authentication and payment processing, leveraging Redis for caching in order to reduce API response time by nearly 35%.
- Diagnosed and resolved production issues, optimizing database queries and pagination to reduce API response times by 20-30%; authored test suites to support CI/CD pipeline reliability.

PROJECTS

Supp – Group Music Listening App | *Python, Django, PostgreSQL* | [GitHub](#) | [Live](#)

Jan 2026 – Mar 2026

- Designed and shipped a real-time collaborative music platform enabling shared listening rooms with synchronized playback across 375M+ SoundCloud tracks.
- Implemented SoundCloud OAuth 2.0 authentication and track search APIs, and developed a WebSocket-based synchronization system that maintained playback consistency within 200 ms across multiple users.
- Tested under load with 20+ concurrent users, validating system reliability under real usage conditions.

Leadify – Business Card Scanner | *Python, Flask, PostgreSQL* | [GitHub](#) | [Live](#)

Oct 2025 – Nov 2025

- Streamlined a scalable full-stack lead capture system integrating Google Cloud Vision API, regex & Gemini for OCR, achieving 98% accuracy on contact-data extraction from high-volume uploads.
- Deployed to production and currently being used by 2 companies, having processed 5000+ cards.

ACHIEVEMENTS

- Awarded merit scholarship for academic excellence, based on GPA merit at my university.
- Spearheaded a team of 3 students to develop and pitch an AI-driven healthcare case study at the International Conference on AI for Social Impact (Ajman, UAE, 2025), advancing to the national finals.
- Participated in 15+ hackathons, gaining experience in building rapid prototypes and POCs under time constraints.

TECHNICAL SKILLS

Languages: C/C++, Python, Java, HTML, CSS, JavaScript, SQL

Frameworks: Django, Flask, FastAPI, ReactJS

Tools & Libraries: Git, Swagger, Postman, Redis, Docker, LLMs, NumPy, Pandas, PyTorch, LangChain

Database: MySQL, PostgreSQL, Oracle, SQLAlchemy

Relevant Coursework: Data Structures & Algorithms (DSA), DBMS, OOPS, OS, CN, Machine Learning, Data Science
